

W.A. Browne (Building Services) Ltd was formed in January 1979 by the coming together of Bill Browne, Whitney Sadler and Godfrey Linfoot in an attempt to raise subcontracting within the building industry to a professional level, with the residential dry lining market the core of the business.

Throughout the 1980's W.A. Browne earned a reputation for quality and performance in the dry lining industry which led to it being nominated for several large drywall packages throughout the Broadgate development in London. The company won several awards for quality, performance and innovation projecting W.A. Browne to one of the leading drywall specialists in the country winning contracts on the majority of prime residential sites in the North East.

In 1990 the company moved to its current premises, a 40,000 sq ft facility in Billingham. The company also has offices in Wakefield and more recently opened an office in Loule in the Algarve, Portugal to develop its EWALL steel framing business.

Always innovative Bill was the first to bring the light gauge steel framing system concept into the UK from America in 1981 and this has consistently been used by W.A. Browne in its prefabricated paneling systems.

As the profile of modern methods of construction increases with the demand for efficient and environmentally sustainable options heightening W.A. Browne continues to expand W.A. Browne Steel in the UK. They have considerable, successful experience in delivering light steel frame solutions to the residential market for both bespoke individual property builds and larger developments and are expanding its application into the commercial sector and component supply to the industry of frame, panels and pods.

Mat McAdams was appointed Managing Director in May 2005 having joined the company in 1998. A stockbroker by profession Mat's commercial drive has seen the business continue to grow and develop alongside reinforcement of the key values of quality, excellent service and innovation.
